

Data flow diagrams and user stories

Data flow diagrams

The Data Flow Diagram (DFD) illustrates how information moves through the Network Request Management System. It represents the interaction between the user, the ServiceNow application, the database, and the Network Support Team. The diagram explains how a network request is created, processed, stored, and updated until it is successfully completed.

Incident Management Process

User Stories

User Story 1

As an Employee,
I want to submit a network request through the ServiceNow portal,
So that I can request network services without sending emails or making phone calls.

User Story 2

As an Employee,
I want my personal details (Name, Email, Phone Number) to be automatically populated,
So that I do not have to enter the same information repeatedly.

User Story 3

As a Network Administrator,
I want to receive all network requests in a centralized system,
So that I can manage and process requests efficiently.

User Story 4

As a Network Support Engineer,
I want to view complete request details before starting work,
So that I can resolve the request faster.

User Story 5

As an Employee,

I want to receive updates about my request status,

So that I know when my request is being processed and completed.
