

Performance Testing

Performance Testing was carried out to evaluate the efficiency, responsiveness, and stability of the **Network Request Management System** developed on the ServiceNow platform. The objective was to ensure that the application performs reliably during normal user operations and provides a seamless experience while submitting and managing network service requests.

Performance Testing Goals

- Measure the response time of the Network Request form.
- Verify smooth request submission and processing.
- Ensure consistent performance during user interactions.
- Validate secure storage and retrieval of request information.
- Confirm that the system remains stable throughout the request lifecycle.

Performance Test Scenarios

Scenario	Expected Behaviour	Actual Outcome
Launch Service Portal	Portal should load successfully	Loaded without issues
Open Network Request Catalog Item	Request form should open quickly	Form displayed successfully
Fill Request Form	Fields should accept valid inputs	Data entered correctly
Submit Request	Request should be created successfully	Request submitted successfully
Store Request Data	Information should be saved in the database	Data stored accurately
Retrieve Submitted Request	Request details should be accessible	Records retrieved successfully
Navigate Between Pages	Pages should load smoothly	Navigation performed without delays

Observations

The application maintained stable performance throughout the testing process. All major functions responded correctly, request submission was completed without errors, and the Service Portal provided a smooth user experience. No significant delays or functional issues were observed during normal usage.

Conclusion

The **Network Request Management System** successfully met the expected performance requirements. The application demonstrated reliable response times, accurate data handling, and stable operation during testing. These results indicate that the solution is suitable for efficiently managing network service requests within an organization and provides a strong foundation for future enhancements such as workflow automation, approval mechanisms, and notification services.
